No, Adobe is our mostÂ .Bicycle 2 The Bicycle 2, known as the Brompton in Britain, is a folding bicycle designed by David Lloyd of Brompton Bicycle Company in London. The bicycle can be folded into a single, roughly C-shape, with the handlebars, seat, brake lever, lock and shift lever remaining in place. As a result, it is quite compact and fits into a briefcase or rucksack. Design By contrast to other folding bicycles, which have a continuous round or oval frame, the Bicycle has a traditional diamond shaped structure, with a front wheel at each angle and the top and bottom joined in the middle by a handlebar. The smaller front wheel is not attached to the frame. Thus it can be folded into a single C-shape, with the handlebars and seat remaining in place. This folding design makes it quite compact, with the frame-and-handlebar components making up most of the bicycle's volume. It is possible to find other folding bicycles with similar frame and handlebar shapes, such as the APE Folding Roadster, the Disc Folding Mountain Bike, and the Miniature Tandem Cycling Vehicle. The Bicycle 2 can only be ridden either one- or two-wheeled, since the tiny front wheel cannot generate enough traction for a three-wheeled configuration. The rear wheel is a little larger and has two spokes, so that it can manage the extra weight. The front wheel has only one spoke and is a double-digitminorig.us/14129352837046 The design was originally called "Bicycle C", and was patented in May 2005. It has become the predominant design and the name was changed in January 2009. The Bicycle is designed with flexibility in mind. It can be converted from a folding bicycle to a conventional bicycle, or vice versa, by removing and replacing various components. The seat supports are designed to be adjustable up or down in height; the top-tube is designed to extend and retract, to provide a cockpit for the rider; the rear drop-out can

be removed and placed at various angles to allow a wider range of wheelbase; the same rear drop-out
